

PRADEEP PRAJAPATI

FULL-STACK DEVELOPER

ABOUT ME

Full Stack Developer with 2+ years of experience, specializing in backend development using Node.js, Moleculer.js, and Laravel.

Experienced in designing scalable microservices architectures and building high-performance systems such as SMS gateway platforms and real-time applications. Proficient in working with MySQL, Redis, and integrating third-party services like Kannel and SMPP.

Strong expertise in REST API development, system optimization, and handling high-volume data processing. Capable of working across both frontend and backend, with a strong preference for backend engineering.

Passionate about building efficient, scalable solutions and continuously learning new technologies to solve complex real-world problems.

EDUCATION

- Bachelor of Science – Gyanodaya Group of Management & Technology, Neemuch, India (2019–2023) 77.58%
- Master of Science – Gyanodaya Group of Management & Technology, Neemuch, India (2023–2025) 70.92%

EXPERIENCE

Full Stack Developer — Dollor Infotech PVT LTD Neemuch India (2023–Present)

- Designed and developed scalable backend systems using Node.js and Moleculer.js
- Built microservices-based architecture for high-volume SMS processing systems
- Developed and integrated REST APIs for multiple applications
- Implemented Redis-based queue and buffering systems for message handling.
- Worked with SMPP protocol and Kannel for SMS gateway integration
- Managed MySQL databases and optimized query performance
- Developed frontend interfaces using Laravel (PHP)
- Deployed services using Docker and ensured system scalability
- Collaborated with cross-functional teams for end-to-end product development

CORE-SKILLS

Languages & Frameworks :

- Node.js
- Moleculer.js
- React.js
- PHP (Laravel)
- HTML \ CSS \ Bootstrap

Backend & Architecture :

- Microservices
- REST API Development
- System Design
- API Integration (http/https)

Databases :

- MySQL (Relational Database Management)
- Redis (Caching & High-Performance Data Storage)

Tools & Technologies :

- Docker (Containerization)
- Kannel (SMS Gateway)
- SMPP Protocol
- Prisma (ORM)
- Git (Version Control)

Core Competencies :

- Performance Optimization & System Tuning
- Advanced Debugging & Issue Resolution
- Scalable Backend Architecture Development

PROJECTS

1. Bulk SMS Sender System :

- Developed a scalable Bulk SMS platform using Node.js, Moleculer.js, and Docker.
- Designed a microservices architecture with multiple independent services for handling SMS workflows
- Key Services:
 - SMPP Server – Managed client connections and message intake.
 - Validator Service – Validates incoming SMS data
 - HLR Service – Retrieved MCC/MNC using external vendors
 - Routing Service – Selected optimal vendor and pricing for message delivery
 - Send SMS Service – Delivered messages via SMS vendors and handled DLR responses.
 - DLR Service – Processed delivery reports and updated system state
 - Buffer & Queue System – Implemented Redis-based buffering for delayed delivery
 - Billing Service – Managed SMS billing and cost calculation
- Used Redis for message queueing and Prisma for database operations
- Ensured high performance, scalability, and fault tolerance in message processing

2. After-Sales Service CRM System :

- Designed and developed a complete After-Sales Service CRM system using Laravel (PHP) for both frontend and backend
- Implemented a role-based architecture with 7 user roles: Super Admin, Admin, Customer Care, Warehouse, Service Center, Technician, and Customer
- Built a centralized system where Super Admin manages full system control and role-based access permissions
- Developed customer complaint management module where Customer Care logs issues, assigns timelines, and maintains service records
- Implemented job workflow system where Service Center analyzes issues, identifies required parts, and manages repair/replacement processes
- Integrated inventory and stock management system where Service Center checks availability of parts and raises requests to Warehouse if required
- Designed warehouse request and part allocation system to ensure smooth supply chain between Warehouse and Service Centers
- Developed technician assignment module where jobs are assigned based on availability for on-site service and issue resolution
- Implemented warranty-based service handling (free replacement under warranty and paid service for out-of-warranty cases)
- Added job lifecycle management including job creation, assignment, tracking, completion, and closure
- Integrated customer feedback system after service completion to improve service quality
- Ensured efficient coordination between multiple roles and optimized service workflow for faster issue resolution

3. Telegram Chatbot for Visa & Passport Services :

- Developed a Telegram chatbot using Node.js for an international airline client
- Automated customer communication for visa and passport services
- Implemented predefined workflows for document requirements and application processes
- Enabled real-time interaction and query resolution
- Improved customer support efficiency and reduced manual workload

Eager to contribute to innovative backend systems and deliver scalable solutions while continuously growing as a developer.
